Following publication of this article [1], the author group became aware of some errors in the Results section of the Abstract.

The correct values are given below in bold, and the original article has been corrected.

Results

The median age was 29 (IQR 28–52) and 235 of the 343 patients were women (69%). Individual symptoms of the C-criterion such as gradual aura spreading over longer than 5 min (P<0.001), two or more aura symptoms occurring in succession (P=0.005), duration of at least one MA symptom for longer than 60 min (P=0.004), and associated headache (P=0.01) were more frequent in younger patients. The number of symptoms (P=0.003) including the C-characteristics decreased with increasing age (P<0.027). Patients with sensory (P<0.001), motor (P=0.04) and speech disturbance (P=0.02) were younger, and older patients with headache had less photophobia (P=0.04) and phonophobia (P=0.03). Sensitivity analyses yielded similar results.
